April 2, 2003

Dear Prospective Client:

Thank you for inquiring about our Pragmatic Groups at Group Connections (formerly at the CNS/McLean Hospital). Our program serves children, adolescents, and young adults with Asperger's Disorder, PDD, nos, Nonverbal Learning Disabilities, and related disorders. Our groups are designed to help individuals with pragmatic language deficits acquire the skills necessary to function more competently with their peers. The groups are designed to be ongoing groups that apply a curriculum of focused skills. Our foci are both the curriculum and the process of the group as it develops. This provides our group members with a safe place to practice their skills and work out peer issues as they develop.

Our group program is comprised of six areas (units) of concentration (Awareness of Self and Others, Body Language, Communication, Social Language, Emotional Development and Awareness and Problem Solving and Critical Thinking). Please find enclosed a copy of our curriculum. New clients are accepted at the beginning of each unit when space is available. A diagnostic consultation provides information regarding a member's readiness to participate in the group.

The fees for our group are based on the following rates, which are subject to change:

Diagnostic Consultation	\$140 (for 1 hour)
Group Therapy	\$55 / session

As we do not accept all insurances, please contact our office to inquire about insurance benefits. To be put on our waiting list, please fill out the enclosed forms and mail them to Liana Peña Morgens, Ph.D. at the address above. Also, please send copies of any previous medical, psychological, or academic evaluations/reports that are relevant. Once these forms are received, you will be mailed a confirmation letter, as well as additional forms. If you have any questions, please contact us at (781) 899-1160.

Sincerely,

Liana Peña Morgens, Ph.D.
